

# The XioSphere.™

## Complete wireless access solution.

Xicom simplifies operations by being a single source provider. Others provide only equipment, software or services. While some may help install equipment or act as a value added reseller, Xicom partners with operators every step of the way.

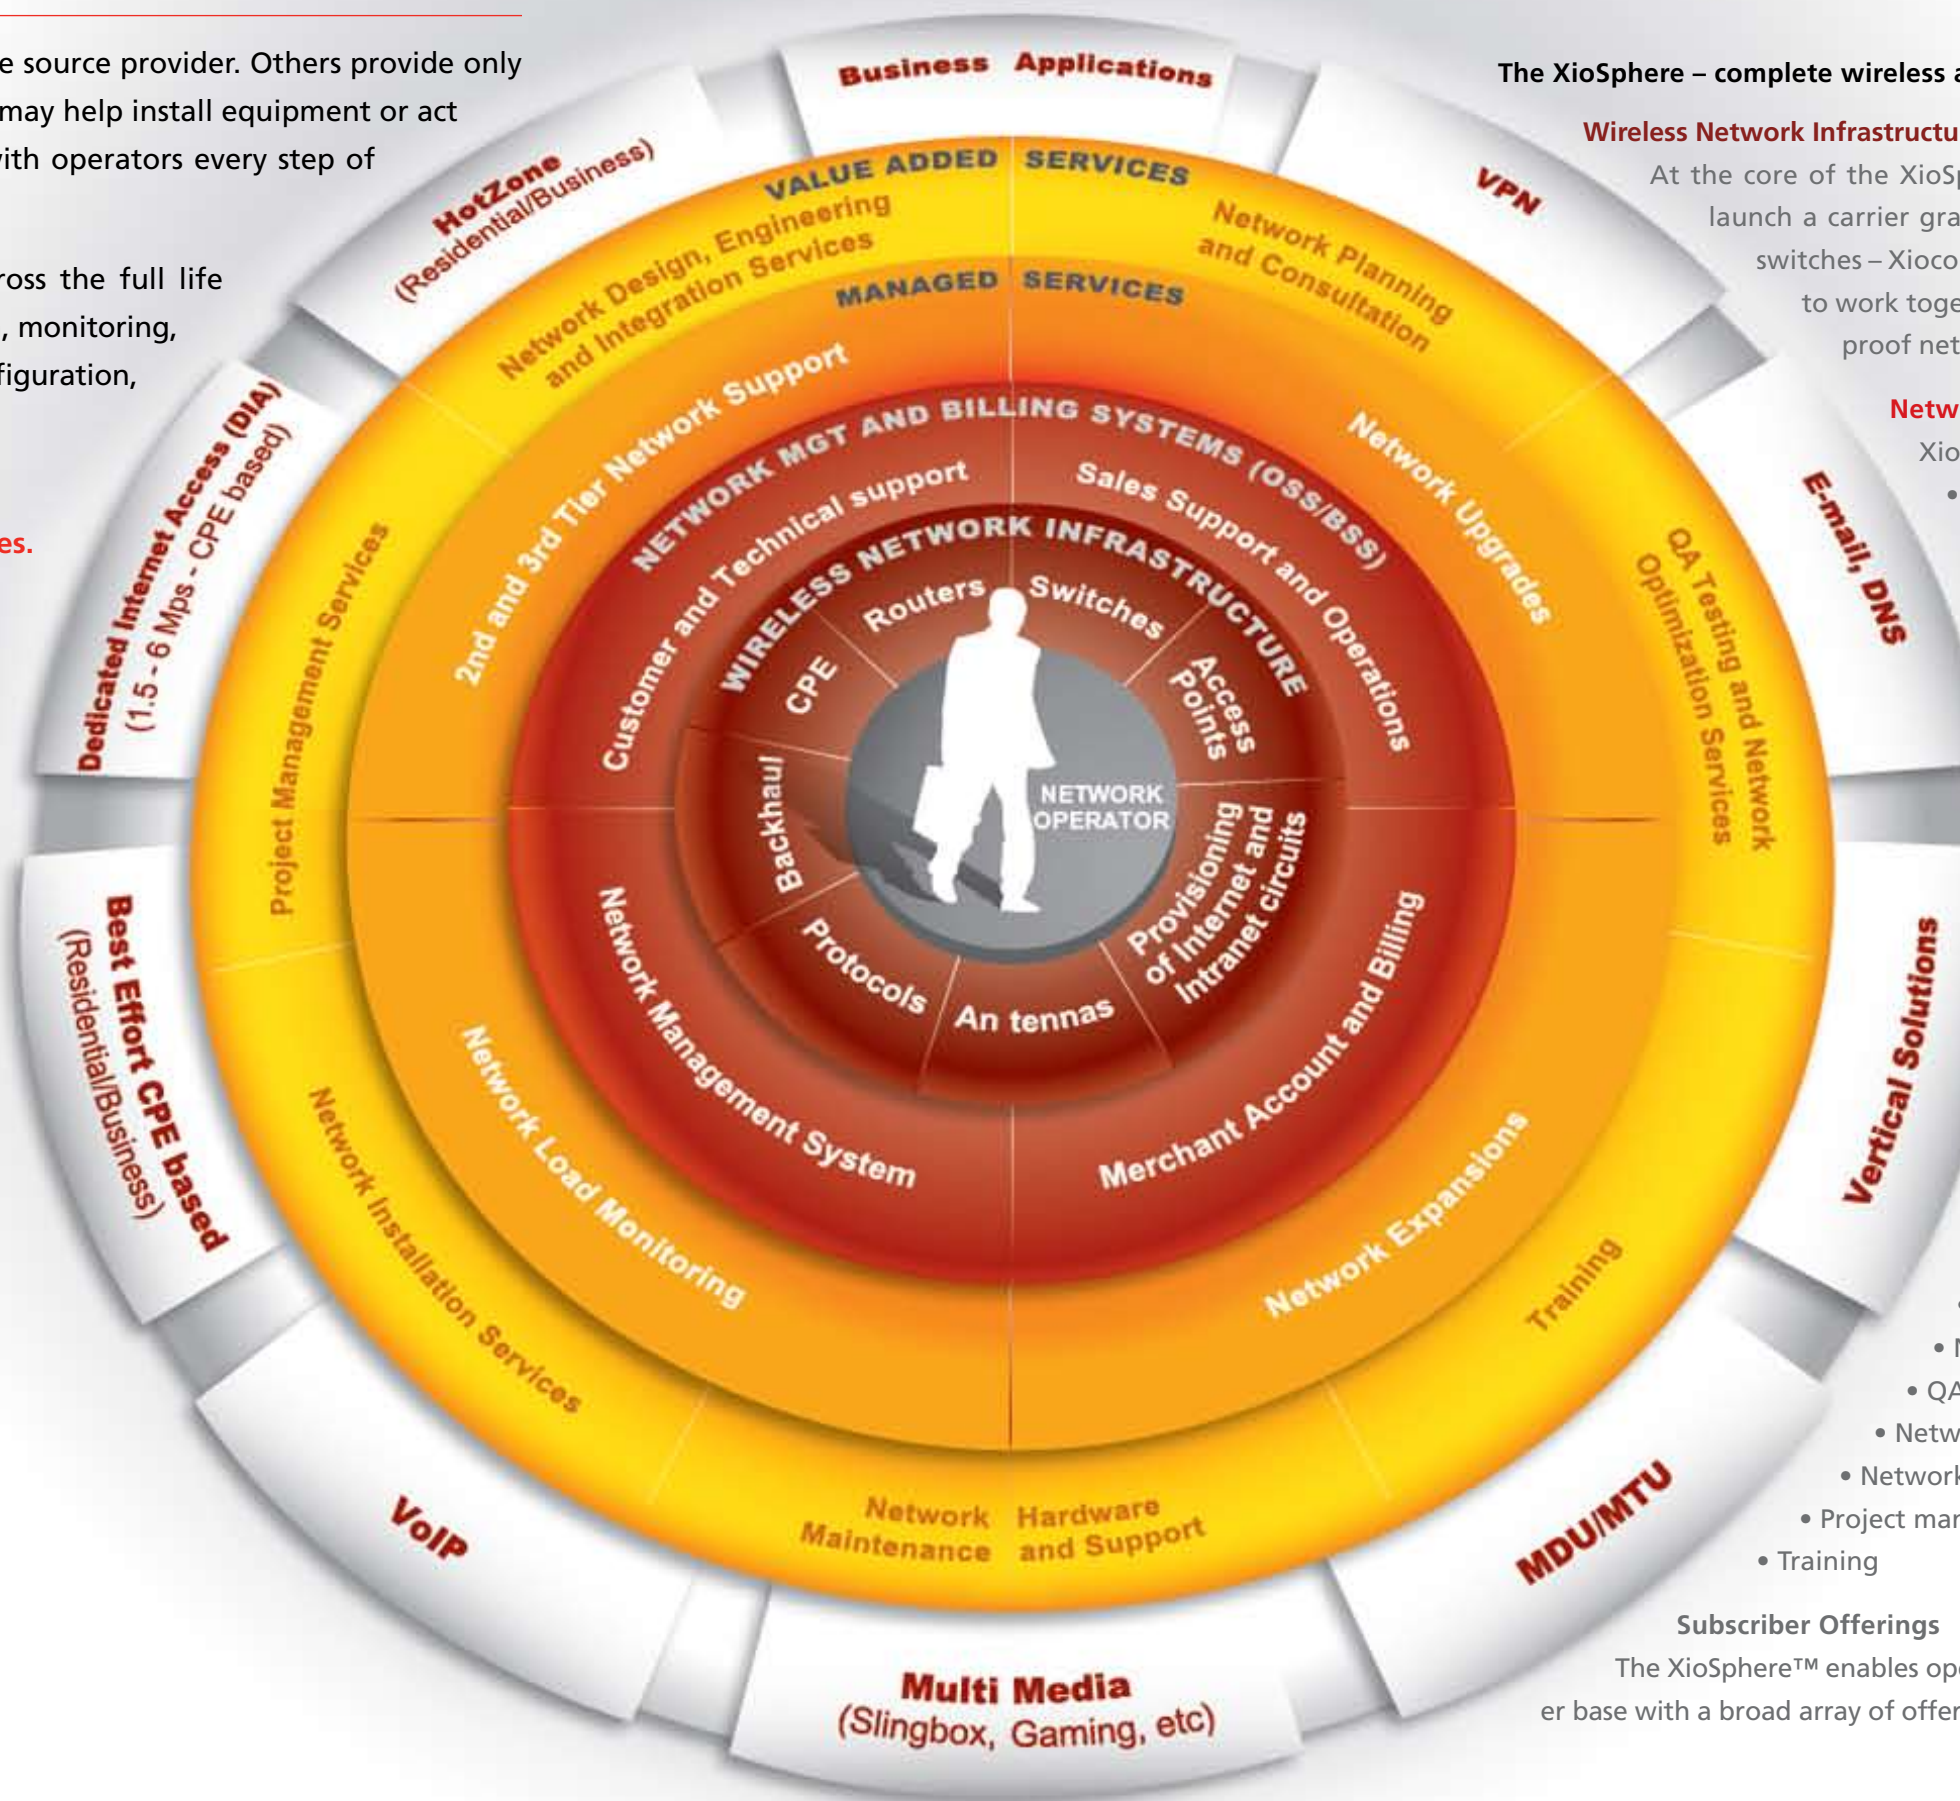

Plus Xicom supports Network Operators across the full life cycle: planning, installation, testing, activation, monitoring, maintenance, optimization, expansion, re-configuration, upgrades, etc.

**You're not outsourcing.**

**You're expanding your resources.**

### XioSphere™ provides the entire platform needed for success:

- Hardware
- Software
- Network planning
- Business and technical expertise
- Process automation
- Full lifecycle experience
- Comfort in developing markets
- Ability to complement network operators' existing capabilities.

### The XioSphere – complete wireless access solution

#### Wireless Network Infrastructure

At the core of the XioSphere™ complete solution is everything necessary to launch a carrier grade wireless network. From backbones to routers and switches – Xicom provides integrated hardware and services designed to work together to provide Network Operators a scalable, future-proof network.

#### Network Management and Billing Systems

- Xicom can help in managing the wireless network:
- Service management – sales support and operations
  - Merchant account and billing
  - Network management systems
  - Customer and technical support

#### Managed Services

Xicom provides delivery and management of network-based services that are necessary on an ongoing basis to maintain and upgrade wireless networks. Typically these managed services are utilized to repair items proactively and delivery can be done using the internet. These include 2nd and 3rd tier network support, network upgrades, network load monitoring and network expansion.

#### Value Added Services

Beyond hardware and managed services, Xicom offers services for all phases of the lifecycle of a wireless network.

These services include:

- Network design engineering and integration
- Network planning and consulting
- QA testing and network optimization
- Network hardware and support
- Network installation services
- Project management services
- Training

#### Subscriber Offerings

The XioSphere™ enables operators to answer the market demands of their subscriber base with a broad array of offerings.
